

Business Rules Document

Web-Based Vehicle Auction Platform

1. Purpose

This document defines the **business rules** governing user participation, auctions, and bidding behavior within the Web-Based Vehicle Auction Platform.

These rules represent **non-negotiable constraints** derived from the client's business process and are enforced by the system to ensure fairness, integrity, and operational correctness.

2. Scope

These rules apply to:

- User verification and access control
- Auction lifecycle management
- Bid validation and winner selection
- Administrative decision-making

3. Business Rules

BR-01: Verified User Requirement for Bidding

Only users whose accounts have been verified by an administrator are permitted to place bids on auctions.

Rationale:

Prevents fraudulent or non-serious bids and ensures buyer accountability.

BR-02: Auction Time Enforcement

Bids shall only be accepted during the auction's defined start and end time.

Rationale:

Ensures fairness and prevents post-closure bidding disputes.

BR-03: Bid Validity Rule

A bid must be greater than the current highest bid and comply with the minimum bid increment defined for the auction.

Rationale:

Maintains structured and competitive bidding.

BR-04: Highest Bid Determination

At any point during an active auction, the highest valid bid is considered the leading bid.

Rationale:

Ensures transparency for all participants.

BR-05: Auction Closure Rule

Once an auction is closed, no new bids shall be accepted or recorded.

Rationale:

Preserves auction finality and data integrity.

BR-06: Winner Selection Authority

The administrator has the authority to confirm the winning bidder after auction closure.

Rationale:

Allows business discretion in exceptional cases (e.g., verification issues).

BR-07: User Role Enforcement

System functionality shall be restricted based on user roles (Guest, Registered User, Verified Buyer, Admin).

Rationale:

Implements role-based access control and prevents unauthorized actions.

BR-08: Bid Immutability

Once recorded, bids shall not be modified or deleted by users.

Rationale:

Ensures auditability and trust in the bidding process.

BR-09: Vehicle-Auction Association

Each auction shall be associated with exactly one vehicle listing.

Rationale:

Prevents ambiguity in auction data and reporting.

BR-10: Auction Completion Status

After a winning bidder is selected, the auction status shall be marked as “Completed”.

Rationale:

Provides clear lifecycle termination and reporting accuracy.
